TOMMER GOLDSTEIN

DATA ANALYST · GAMING & PRODUCT ANALYTICS

Giv'at Shmuel | 054-560-3877 | tommer1999@gmail.com | Portfolio

SUMMARY

Fourth-year Industrial & Information Systems Engineering student who turns data into decisions people act on. I build dashboards in Tableau and teach it at Bar-Ilan, I have presented KPIs to a hospital's senior management, and I build games in my own time. Looking for a Data Analyst role in gaming.

PROJECTS

Operational KPI Analysis | Meir Medical Center

- Cleaned and analysed the hospital's operational data in Python (pandas) and Excel, and built the KPI dashboard for senior management in Tableau.
- Found a clear correlation between faulty reporting and the war period: data quality dropped sharply under stress.
- The hospital built emergency data-collection protocols on the strength of the findings. Final semester project, grade 95.

Sports Analytics & ROI Dashboard | Bnei Herzliya Sports Club

- Built a Tableau dashboard of budget allocation against sporting results, with the data prepared in Python and Excel.
- Showed that the sports receiving most of the funding were not producing results, Olympic or competitive, in proportion to the spend.
- 2nd place in the Shark Tank competition, judged by entrepreneurs from industry and academia.

Indy & the Temple of the Serpent | Personal Project

- Built a 2D action-platformer in JavaScript and HTML5 Canvas, no frameworks: 11 levels with a designed difficulty curve, whip-swing physics, enemy AI, a dialogue engine and a three-phase boss fight.
- Produced every asset with AI tools: Suno for the soundtrack and sound design, Gemini for backgrounds and in-game art.
- Shipped and playable on desktop and mobile, with full touch controls.

EXPERIENCE

Teaching Assistant, Interfaces & Information Presentation | Bar-Ilan University

- Teach Tableau, dashboard design and KPI definition to 60 engineering students across two classes. Tableau is part of the syllabus.
- Review and grade student dashboards: what reads at a glance, what misleads, and what a decision-maker actually needs.

QA Game Tester | Faculty of Education, Bar-Ilan University

- Tested an educational game in development, reproducing and documenting bugs and verifying fixes across release cycles.
- Proposed improvements to the game itself and saw those suggestions acted on.

Help Desk & System Administrator | Redis

- Wrote SQL daily against user data to find duplicates and anomalies, and Python to automate repetitive work.
- Owned site-wide technical support at a global high-tech company, working across departments and R&D.

Manager & Producer | Crocodile Bill (Independent Band)

- Ran A/B tests on the band's social media, comparing post formats and keeping the ones that performed.
- Run the band end to end: logistics, budget ownership, partner negotiation and promotion.

EDUCATION

B.Sc. Industrial & Information Systems Engineering

Bar-Ilan University · 2023-Present

Fourth year · Operations Research & Machine Learning

COURSES

Business Entrepreneurship

Jerusalem Municipality

Mixing & Mastering with Ableton

BPM College

SKILLS

Analysis: SQL, Python (pandas, NumPy), Excel

BI: Tableau, dashboard design, data visualization

Analytics: KPI definition, A/B testing, correlation and ROI analysis

Other: Presenting insights to leadership and non-technical teams
